

Lesson 6 – Websites

Task:

- Create *a website* consisting of several *related webpages*.
- Use the *webpage* created on the previous lesson as a basic template ----->
- A content of individual webpages is up to you (examples are below).
- Make each webpage accessible from the navigation menu via its URL.

Recommended folder structure:

website [folder]

- index.html
- webpages [folder]
 - webpage1.html
 - webpage2.html
 - webpage3.html
- images [folder]
 - img1.jpeg
 - img2.gif
 - img4.png

Recommended content:

- *Header* with a title and logo of the website
- *Main page* (index.html) and 3 subpages (e.g. article, videos, game, contact...).
- *Navigation menu* as unordered list with links to individual webpages.
- *Subpages* with:
 - *Articles* according to your interest (i.e. from Wikipedia)
 - *Gallery* of images aligned in a matrix (using HTML table).
 - *Embedded video* or *game* (using iframe)
 - *Contact info*.
- *Footer* with a creation date, a name of the author and a copyright notice.

Validity check:

- Make all the webpages valid according to HTML5 standards - <https://validator.w3.org/>
