Lesson 12 – CSS Display & Float

CSS Display Property:
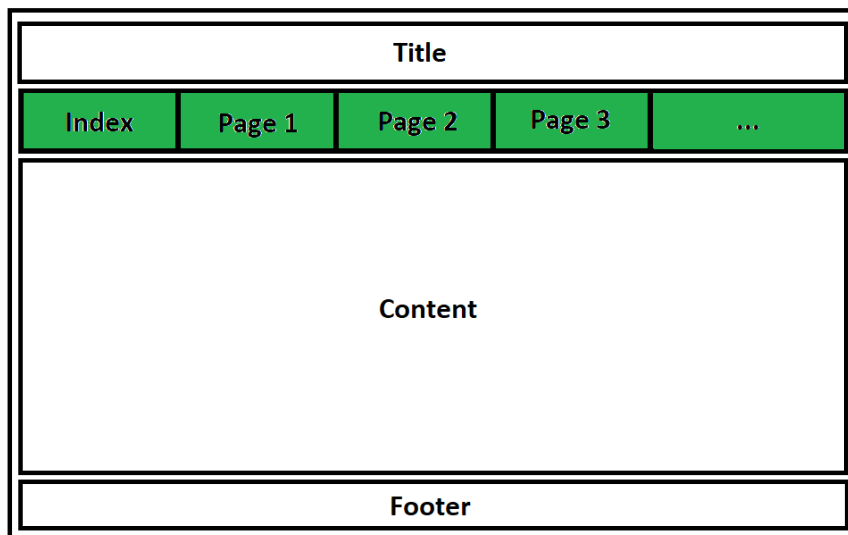

- read and try: https://www.w3schools.com/css/css_display_visibility.asp
- complete the exercises: [1], [2], [3], [4]

CSS Float Property:

- read and try: https://www.w3schools.com/css/css_float.asp
- check this example website created entirely using float property

Task:

- Create an **alternative layout***** for your website.
- Use the float property to create a **horizontal menu** as seen on the image:

Instructions:
1. First, make sure you have **finished the upgrade** of **your website** by moving all **CSS** declarations to the **external stylesheet** as it was required in previous tasks. ***If NOT, do it FIRST!***
2. **Backup** your **former stylesheet** by creating its **copy**. Rename it, e.g. to *oldstylesheet.css*
3. **Edit** your main **stylesheet** in order to create horizontal menu:
   o Use this example as a recipe.
   o Apply **display** and **float** properties to move *list items* **side by side**.
   o Resize remaining **div**s to fill the entire width of the page (*just remove any size properties*)

*** *Note: If you have already designed your website with horizontal menu, try to make it vertical instead.*
